

Industrial Engine for Generators and Water Pumps

This high-performance engine is designed for various industrial and machinery applications. It features a robust construction for durability and long-lasting performance.

Product Overview

Industrial Power Solution

This high-performance industrial engine is precision-engineered to provide reliable power for generators and water pumps. Featuring robust construction, it ensures durability and consistent performance in demanding environments. The unit optimizes fuel efficiency and power output through an advanced combustion chamber and ignition system.

Technical Specifications

Power Output

6.5 HP

Rated Horsepower

Model Number

WM168FB

Features

Core Components

Reliable Ignition, Efficient Combustion Chamber, Durable Crankshaft

Applications

Recommended Equipment

- Electric Generators
- Water Pumps
- General Industrial Machinery
