

Industrial Gate Valve (DN 50-1200)

This industrial gate valve is designed according to standards and features a flanged connection. It is constructed from durable materials suitable for controlling the flow of various fluids and gases in demanding industrial applications.

Product Overview

Industrial Gate Valve

This industrial gate valve is engineered according to Russian GOST standards to ensure reliability and performance in demanding piping systems. It features a robust design with flanged connections for secure integration and precise manual flow control via a high-torque handwheel. Designed for versatility, it is suitable for managing the flow of various industrial fluids and gases.
