

Industrial Gearbox for Metal Forming Machines

This heavy-duty industrial gearbox is designed for metal forming machines. It features a flanged input connection, a splined output shaft, and a durable housing.

Product Overview

Heavy-Duty Industrial Performance

This robust industrial gearbox is specifically engineered for high-torque applications within metal forming machinery. Designed for reliability in demanding metalworking environments, it features a durable housing and precise mechanical connections. It ensures consistent performance and longevity for heavy-duty industrial tasks.

Technical Specifications

Key Features

- High torque capacity
- Durable housing construction
- Flanged input design
- Splined output shaft

Input Connection	Flanged
Output Shaft	Splined
Suitable Applications	Metal Forming, Metalworking, Heavy Duty Industrial
