

Industrial Ice Block Production Machine

This industrial ice block machine is designed for efficient and large-scale ice production. It features a robust construction with multiple compartments and a control panel for easy operation.

Overview

Industrial Ice Block Production Machine

This industrial ice block machine is engineered for high-efficiency, large-scale ice production in demanding environments. Featuring advanced refrigeration technology and robust construction, it ensures stable operation even in regions with unstable power supplies. Designed for ease of use and maintenance, this unit provides a reliable, consistent ice supply for commercial applications.

Performance

Production Capacity

25 kg

Block Weight

6 hours

Cycle Time

Operating Conditions

Parameter	Value
Initial Water Temperature	21 °C
Ambient Temperature	Under 40 °C

Features

Key Features

- Energy economizer technology
- Stable running performance
- Easy cleaning design
- Simple operation interface
- Protective functions for unstable power supply

Compressor Origin

USA, Italy, Japan

Logistics

Packaging

Wooden case
