

Industrial Instant Food Production Line

This industrial-grade stainless steel processing equipment is designed for the production of instant food products. The system incorporates pipes, valves, and control panels for efficient and automated operation in large-scale food manufacturing facilities.

Overview

Industrial Instant Food Processing System

This industrial-grade production line is engineered for high-efficiency instant food manufacturing. Constructed from durable stainless steel, the system features a robust horizontal processing tank elevated on support pillars, ensuring seamless workflow integration. Equipped with integrated piping, valves, and automated control panels, this solution is designed to meet the rigorous demands of large-scale food production facilities.

Technical Specifications

Material Construction

Stainless Steel • Industrial Grade

System Components

- Horizontal processing tank
- Automated control panel
- Integrated piping system
- Support pillar structure
- Flow control valves

Operational Features

Automation Level	Automated
Ideal Application	Large-scale manufacturing, Instant food production
