

Industrial Material Cleaning Machine with Dust Collection

This industrial cleaning machine efficiently processes materials. It features a cylindrical drum, a high-efficiency dust collection system, and an integrated control panel.

Overview

Industrial Material Cleaning Solution

This industrial cleaning machine is engineered for high-efficiency material processing and separation. Featuring a robust cylindrical drum design, it ensures thorough cleaning performance even in demanding environments. The integrated high-efficiency dust collection system maintains air quality and operational safety, while the centralized control panel allows for precise management of cleaning parameters.

Technical Specifications

Operational Capabilities

1 High

Dust Collection Efficiency

1 Integrated

Control System

Design Type

Cylindrical Drum

Key Features

Dust Collection System, Integrated Control Panel, Material Separation, Heavy-duty Construction
