

Industrial Metal Forming Machine

This heavy-duty machine is designed for forming metal materials in industrial settings. It utilizes rollers and hydraulic systems to shape metal into the desired forms.

Overview

Industrial Metal Forming Capability

This heavy-duty industrial machine tool is engineered for precision metal forming and rolling applications. Featuring a robust, reinforced frame and integrated hydraulic systems, it is designed for demanding industrial environments. The machine includes advanced adjustment mechanisms and safety features to ensure consistent performance and operational reliability.

Technical Specifications

Key Systems

- Hydraulic systems
- Mechanical rollers
- Adjustment mechanisms
- Integrated safety features

Construction	Heavy-duty industrial frame
Application	Metal Forming, Rolling, Industrial Processing

Operational Details

Safety Features

Integrated Safety • Industrial Grade
