

Industrial Motor and Engine Unit

This is a heavy-duty motor and engine unit suitable for various industrial or machinery applications. The engine features a complex arrangement of pipes, filters and other mechanical components.

Product Overview

Industrial Motor and Engine Unit

This heavy-duty industrial motor and engine unit is designed for demanding machinery applications. The assembly features a robust engine block, integrated cooling fan, and a complex array of pipes and filtration systems. Currently mounted on a testing stand, this unit is prepared for inspection or installation in industrial environments.

Technical Specifications

Cooling System	Integrated front-mounted cooling fan
Filtration Components	Blue industrial filters, Multi-stage piping

Condition and Mounting

Mounting	Mounted on Stand • Ready for Testing
Condition	Used (signs of wear and operational residue present)
