

Industrial Network Communication Module

This network communication module enables data transmission across industrial networks. Its robust design ensures reliable connectivity for telecom applications.

Product Overview

Industrial Network Communication Module

This industrial network communication module is engineered for robust connectivity in demanding environments. Featuring a durable metallic frame and a specialized central housing, it provides reliable data transmission capabilities. Its structured design ensures stable mounting and integration into existing industrial infrastructure, making it an essential component for professional network management.

Physical Characteristics

Form Factor

Industrial • Modular

Construction Material

Metallic frame with high-durability housing

Design Elements

Vertical supports, Integrated handle, Central display module, Industrial-grade housing
