

Industrial Plastic Extrusion System

This industrial plastic extrusion system is designed for continuous operation. It provides consistent output for manufacturing various plastic products.

Product Overview

Industrial Plastic Extrusion System

This high-performance industrial plastic extrusion system is engineered for demanding manufacturing environments. Featuring a robust central cylindrical structure with integrated material handling ducts, it is designed for efficiency and durability in heavy-duty plastic processing applications. The system supports complex material handling workflows, ensuring reliable and consistent production output.

Technical Construction

Structural Design	Central cylindrical structure with radiating rectangular ducts
Installation Requirements	Heavy-duty manufacturing, Metal grate flooring compatible, Overhead piping support

Key Metrics

System Type
Industrial • Extrusion
