Product Overview

Industrial-Grade Load Transfer Solution

The JN-001 industrial pulley wheel is a heavy-duty assembly engineered for demanding environments that require consistent and reliable load transfer. Featuring a robust metal frame and durable roller wheels, it is optimized for smooth, low-friction movement across various track or rail configurations. With integrated mounting plates and multiple attachment points, this component provides the stability and longevity necessary for intensive industrial and commercial applications.

Technical Specifications

Performance Metrics

4 pcs

Roller Wheel Count

Construction Material

High-quality industrial metal

Key Features

Heavy-duty construction, Low-friction movement, Integrated mounting bracket, Robust metal frame

Installation Data

Recommended Uses

- Industrial track systems
- Commercial sliding assemblies
- Load movement and transfer

Mounting Type

Multi-hole plate bracket
