

Industrial Rubber and Plastic Winding Machine

This winding machine is designed for processing rubber and plastic materials. It is equipped with a robust frame, multiple rollers, and a control panel for operational adjustments.

Product Overview

Industrial Processing Efficiency

This industrial winding machine is specifically engineered for the inspection and packing of various synthetic materials, including PVC, PU knitted leather, and specialized upholstery materials. It provides a robust solution for material handling in production environments, ensuring consistency and reliability. Designed for industrial-scale operations, it serves as a critical component for finishing and quality control workflows.

Technical Specifications

Primary Functions

- Material Inspection
- Material Winding
- Material Packing

Compatible Materials

PVC, PU Knitted Leather, Shoe Leather, Sofa Leather, Shoe Upper Leather, Certificate Leather, Bag Leather
