

Industrial Sewing Machine for Apparel and Shoe Manufacturing

This industrial sewing machine is designed for manufacturing garments and shoes. It features high-speed operation, a precise stitching mechanism, and a robust construction for continuous use.

Overview

High-Performance Industrial Sewing Solution

This industrial sewing machine is engineered specifically for the rigorous demands of garment, shoe, and accessory manufacturing. Built for continuous operation, it features a high-speed mechanism designed to deliver precise stitching across a variety of textile materials. Its robust construction ensures reliability and longevity in high-volume production environments.

Technical Specifications

Key Features

- High-speed operation
- Precise stitching mechanism
- Robust industrial construction
- Continuous duty cycle

Model Identifier	GK32000
Primary Applications	Apparel Manufacturing, Shoe Production, Textile Accessories
