

Industrial Shutter Ventilating Fan

This ventilating fan is designed for efficient air circulation and ventilation in industrial and commercial environments. The fan includes integrated shutters that open and close automatically, which prevents backdraft and ensures energy efficiency.

Product Overview

Industrial Efficiency

This industrial shutter ventilating fan is engineered for high-performance air circulation and ventilation in demanding commercial and factory environments. The design prioritizes aerodynamic blade efficiency to maximize airflow while keeping operational noise levels minimal. Featuring an automated shutter system, the unit prevents backdraft and optimizes energy consumption during operation. It serves as an ideal solution for effectively removing stale air, odors, and industrial pollutants from warehouses and workshops.

Key Features

Operational Features

- Integrated automatic shutters
- Backdraft prevention
- Aerodynamically optimized fan blades
- Robust square frame construction

Applications

Suitable Environments

Factories, Warehouses, Workshops, Industrial Settings

Performance

Benefits

Energy Efficient • Low Maintenance • Cost-Effective Operation
