

Industrial Slurry Pump for Abrasive Fluids

This heavy-duty slurry pump is designed for handling abrasive and high-density slurries in demanding industrial applications. Its robust construction uses wear-resistant materials to ensure long service life and minimal downtime.

Product Overview

Industrial-Grade Slurry Handling

This heavy-duty slurry pump is engineered specifically for the transport of abrasive and high-density fluids in demanding environments like mining and dredging. Its robust construction utilizes wear-resistant materials to ensure long service life and reduced maintenance cycles. The unit features a stable, integrated base designed for seamless installation and reliable operation in complex industrial systems.

Key Features

Durability Characteristics

- Wear-resistant material composition
- Engineered for solids-laden fluids
- Robust base mounting system

Primary Applications

Mining, Dredging, Abrasive Slurry Pumping, High-Density Fluid Transport

Included Components

Included Spare & Essential Parts

Component Name
Pump Cover
Filler Pressure Cover
Shaft Sleeve
Mechanical Seal
Rotor
Impeller
