

Industrial Sprocket for Chain and Conveyor Belt Systems

These sprockets are designed for efficient power transmission in chain and conveyor belt systems. The sprockets are constructed from durable materials, offering excellent wear resistance and a long service life.

Product Overview

Industrial Sprocket for Chain and Conveyor Systems

These high-quality sprockets are engineered specifically for demanding chain and conveyor belt applications. Designed for efficient power transmission, they offer reliable performance and excellent wear resistance to ensure a long service life in industrial environments. Precision-machined teeth facilitate smooth chain engagement, effectively reducing operational noise and wear.

Technical Details

Model Identifier	168F
Configuration	Double Sprocket

Key Features

Performance Highlights

1 High Wear Resistance	1 Optimized Noise Reduction
----------------------------------	---------------------------------------

Suitable Applications	Chain Systems, Conveyor Belts, Power Transmission, Industrial Machinery
-----------------------	---
