

Industrial Three-Phase Asynchronous Motor

High-efficiency three-phase asynchronous motors are designed for diverse industrial applications. These motors feature robust construction, optimal cooling, and reliable performance.

Product Overview

High-Efficiency Industrial Performance

These industrial three-phase asynchronous motors are engineered for reliability and high performance across a wide range of demanding applications. Featuring robust construction and optimized cooling systems, they ensure consistent operation even under continuous load. They serve as an ideal power solution for critical machinery including pumps, fans, and compressors.

Technical Specifications

Typical Applications

- Pumps
- Fans
- Compressors
- General Industrial Machinery

Series

Cyx3 Series

Motor Type

Three-Phase Asynchronous

Key Features

Robust Construction, Optimized Cooling, High Efficiency, Reliable Performance
