

Industrial Tubing Spool with Flanged Connections

This tubing spool is designed for connecting and managing multiple tubing lines in industrial applications. The spool features flanged connections at the top and bottom for secure attachment to other equipment and multiple ports around the central body for connecting various tubing lines.

Product Overview

Industrial Tubing Spool Utility

This industrial tubing spool is engineered for the secure management and connection of multiple tubing lines in demanding field environments. Featuring robust flanged connections at both the top and bottom, the unit ensures high-integrity attachment to secondary equipment. The central body is precision-designed with multiple peripheral ports, providing flexibility for complex piping and control line configurations.

Technical Specifications

Key Features

- Dual flanged end connections
- Multi-port central body design
- Heavy-duty industrial construction
- Versatile tubing line integration

Application Compatibility

Industrial Environments • Piping Management • Tubing Line Control

Connection Type

Flanged
