

Industrial Vibratory Motor

This industrial vibratory motor is engineered for applications requiring vibration or oscillation. It features adjustable eccentric weights to control vibration amplitude and a totally enclosed design for protection against contaminants.

Product Overview

Industrial Vibratory Motor

The YZO series vibratory motor is a robust and reliable industrial component designed for a wide range of applications requiring vibration or oscillation. It features a rugged, enclosed construction built for durability in harsh operating environments, effectively protecting internal components from dust and moisture. With adjustable eccentric weights to control the amplitude of vibration, this motor provides consistent, efficient performance for continuous industrial operation.

Key Features

Key Features

- Light weight design
- Simple, durable structure
- Low noise operation
- Easy installation
- Convenient maintenance
- Stepless speed regulated centrifugal force

Operational Characteristics

Enclosed Structure, Non-Explosion-Proof, Continuous Duty

Applications

Suitable Applications

- Feeding machines
- Transporting machines
- Drying machines
- Shakeout machines
- Vibrating feeders and screens
- Compactors
