

Industrial Water Chiller

This high-efficiency industrial chiller is designed for diverse cooling applications. Its robust construction includes a control panel with gauges and a digital display for monitoring performance.

Overview

Industrial Cooling Solution

This industrial water chiller is designed to enhance production efficiency and quality by providing precise temperature control across a wide range of industries, including plastics, medicine, electronics, and printing. Featuring a robust electrostatic spray powder shell and a European-inspired design, this unit combines elegant aesthetics with reliable, high-performance operation. It is an essential support machine for modern manufacturing, offering simple, intuitive controls for demanding industrial cooling requirements.

Key Features

Compliance

CE Approved

Suitable Industries

Leather Processing, Plastic Injection, Surface Treatment, Medicine, Chemical, Hydraulic Systems, Laser, Shoe-making, Electronics, Printing

Technical Specifications

Design Features

- Electrostatic spray powder shell
- European design
- Digital display monitoring
- Compact integration

Cooling Type

Water cooling
