

Industrial Wire Mesh

Industrial wire mesh is used for filtration, screening, or reinforcement of materials. The mesh is constructed from interwoven metal wires, creating a strong and flexible barrier.

Product Overview

Industrial-Grade Wire Mesh

This industrial wire mesh is engineered for demanding environments, featuring a robust interwoven metal construction. Designed for versatility, it provides a strong yet flexible barrier suitable for critical industrial processes including material filtration, ore screening, and structural reinforcement. Its durable metallic composition ensures long-lasting performance in metallurgy and mining applications.

Technical Specifications

Mesh Pattern	Diamond
Material Composition	Steel, Metal Alloy

Applications

Common Industrial Applications

- Mining machinery ore separation
- Construction reinforcement
- Industrial filtration
- Material containment

Key Features

Performance Highlights

1 High Structural Integrity	1 High Flexibility
