

Infrared Quartz Space Heater

This infrared quartz heater is designed for efficient, directional heating. It features a circular heating element with adjustable settings for personal or small area heating.

Product Overview

Efficient Infrared Heating Solution

This infrared quartz space heater is engineered for rapid, directional warmth, making it an ideal choice for localized heating in small areas. Its design features a high-efficiency circular heating element protected by a durable wire mesh grill, all housed within a stable, round frame. With intuitive controls located on the base, this unit offers a user-friendly experience for professional or personal comfort settings.
