

Infrared Radiant Space Heater

This infrared radiant space heater provides efficient and localized heating. It utilizes an infrared heating element to directly warm objects and people within its range, minimizing energy waste.

Product Overview

Efficient Targeted Heating

The PHC816EF infrared radiant space heater is engineered for efficient, localized heating solutions. By utilizing advanced infrared technology, it warms objects and people directly rather than the surrounding air, significantly reducing energy waste. Its durable metal construction and versatile mounting options make it an ideal choice for workshops, garages, and outdoor patio spaces.

Technical Specifications

Heating Method	Infrared Radiant
Design Features	Elongated Housing, Protective Grill, Metal Construction

Control & Operation

Control Panel	Digital
Timer Settings	Yes

Installation

Mounting	Adjustable Brackets
----------	---------------------

Applications

Recommended Environments

- Garages
- Workshops
- Patios
