

Injection Mould for Water Drippers and Buckets

This injection mould is designed for manufacturing water drippers and bucket components. It ensures consistent part quality and dimensional accuracy in high-volume production.

Product Overview

Precision Injection Moulding Solutions

This injection mould set is precision-engineered for the high-volume production of water drippers and bucket components. Designed for durability and consistent performance, the mould features optimized cooling channels for efficient thermal management and precise cavity geometry. It is suitable for a wide range of plastic resins, making it an ideal choice for agricultural irrigation systems and industrial container manufacturing.

Technical Capabilities

Core Competencies

- Precision mould design
- High-volume injection moulding
- Advanced cooling channel optimization
- Automotive-grade quality standards

Certifications

ISO 9001:2008

Operational Standards

Quality & Process Control

2006 Year

Established Experience

Management Systems

ERP System Implemented • Standardized Quality Control • In-house Testing Laboratory
