

Inline Centrifugal Water Pump

These inline centrifugal pumps are engineered for efficient and reliable fluid transfer across diverse industrial applications. Their close-coupled design minimizes spatial demands while ensuring straightforward installation.

Product Overview

High-Efficiency Pipeline Pumps

The DFG series of pipeline pumps are engineered for reliable and efficient fluid transfer across diverse industrial applications. Featuring a robust, close-coupled design, these pumps are optimized to minimize space requirements while simplifying the installation process. Their advanced hydraulic engineering ensures consistent high flow rates and pressure heads, making them a versatile solution for handling both clean and slightly contaminated fluids.

Technical Details

Pump Type	Inline Centrifugal
Series	DFG
Configuration	Close-coupled

Performance & Application

Key Design Benefits

- Space-saving footprint
- Simplified installation
- High hydraulic efficiency
- Durable construction

Fluid Compatibility	Clean fluids, Slightly contaminated fluids
---------------------	--
