

# Interactive Touchscreen Overlay Frame

This touch frame is designed for interactive displays, converting standard screens into touch-sensitive interfaces. It utilizes optical sensing technologies to accurately detect touch events.

## Product Overview

### Interactive Touchscreen Capability

This interactive touchscreen overlay frame is designed to transform standard display screens into responsive, touch-sensitive interfaces. Utilizing advanced optical or infrared sensing technology, the frame provides a robust and reliable user experience for high-traffic environments. It is an ideal solution for upgrading existing hardware in digital signage, interactive kiosks, and educational display setups.

## Physical Properties

Construction Material	Durable aluminum or plastic composite
-----------------------	---------------------------------------

## Applications

### Suitable Applications

- Interactive kiosks
- Digital signage
- Educational displays

## Key Features

Primary Benefits	Touch-Sensitive Interface, Infrared/Optical Sensing, Robust Build, High Responsiveness
------------------	--
