

Interactive Whiteboard for Presentations

This interactive whiteboard is designed for dynamic presentations and collaborative sessions. It offers a user-friendly interface and responsive touch capabilities.

Product Overview

Interactive Whiteboard for Professional Presentations

This interactive whiteboard utilizes advanced wireless electromagnetic induction technology to create a seamless interface between users, software, and computers. By connecting directly to a PC, the board synchronously displays content and allows for full computer control using an electromagnetic stylus. This system replaces traditional one-way projection equipment, enabling dynamic, two-way interaction for collaborative work and presentations.

Technical Capabilities

System Integration

1 Required

PC Connection

Technology	Wireless Electromagnetic Induction
Input Method	Electromagnetic Stylus
Key Features	PC Synchronization, Mouse Replacement, Left & Right Click Support, Interactive Interface
