

Interconnected Smoke Detector Set for Comprehensive Fire Safety

This interconnected smoke detector set is designed for residential or commercial use. The detectors feature a circular design with a prominent test button and a central vent for smoke detection, ensuring early warning of potential fires.

Product Overview

Comprehensive Fire Safety

This interconnected smoke detector set is designed to provide robust fire safety for both residential and commercial environments. By linking multiple units together, the system ensures that if one detector senses smoke, all units sound an alarm simultaneously, providing early warning across the entire premises. The sleek, circular design features a prominent test button for easy maintenance and a central vent for highly sensitive smoke detection.

Key Features

System Capabilities

- Interconnected alarm system
- Early fire detection
- Residential and commercial compatibility
- Integrated test button
- Centralized vent design
