

Internal Combustion Engine for Machinery

This internal combustion engine is designed for various machinery applications. It features a multi-cylinder configuration with components such as fuel injectors, fuel and oil filters, and a cooling fan.

Overview

High-Performance Industrial Engine

This robust internal combustion engine is engineered for demanding machinery applications, offering reliability and power for heavy-duty tasks. Designed with a multi-cylinder configuration, it is optimized for consistent performance in agricultural equipment, construction machinery, and industrial power generation. The unit features integrated fluid management systems, including mechanical fuel injection, ensuring efficient operation in diverse industrial environments.

Technical Specifications

Included Components

- Fuel Injectors
- Fuel Filter
- Oil Filter
- Cooling Fan
- High-Pressure Fuel Lines

Engine Type	Internal Combustion (Diesel)
Fuel System	Mechanical Fuel Injection

Applications

Suitable Industries	Agricultural Equipment, Construction Machinery, Industrial Generators
