

Internal Combustion Engine

This is an internal combustion engine used for vehicle power generation. The engine features a complex arrangement of parts.

Product Overview

High-Performance Combustion Engine

This internal combustion engine is engineered for reliability and complex mechanical efficiency. Featuring a robust aluminum engine block with a precision-finished silver exterior, it is designed to withstand rigorous operational demands. The unit integrates essential components including the carburetor, starter motor, and optimized hose routing to ensure seamless performance and durability for automotive applications.

Construction & Materials

Block Material	Aluminum
Finish	Silver

Key Components

Included Components

- Carburetor
- Starter Motor
- Engine Block
- Hoses and Wiring Harnesses
