

Internal Computer Data Cable

This computer cable is designed for internal computer connections or low-power external peripherals. The flexible, flat design allows for easy routing and space-saving installations.

Overview

Reliable Internal Connectivity

This internal computer data cable is engineered for consistent signal transmission in compact environments. Featuring a flexible, flat design, it allows for efficient routing and space-saving installation within computer chassis or peripheral setups. Constructed with high-quality stranded copper conductors and durable PVC insulation, it ensures long-term reliability for your data connectivity needs.

Physical Characteristics

Cable Color

Red

Cable Design

Flat, flexible ribbon-style

Insulation Material

PVC (Polyvinyl Chloride)

Conductor Type

Stranded copper

Applications

Primary Use Cases

- Internal computer connections
- Low-power peripheral interfacing
- Space-constrained signal routing
