

Internal Computer Data Cable

This is a computer cable for internal connections. It is typically flat and flexible for easy routing inside a computer.

Product Overview

Internal Computer Data Cable

This internal computer data cable is designed for reliable data transmission within computer systems and electronic enclosures. Featuring a flat and flexible ribbon-style design, it allows for efficient routing in confined spaces, ensuring optimal airflow and cable management. The durable construction and secure connectors provide a stable connection for critical internal hardware components.

Physical Characteristics

Flexibility

High Flexibility • Flat Design

Cable Type	Ribbon Cable
