

Inverter CO2 Protective Welder

This Inverter CO2 Protective Welder is lightweight and simple to install. It offers stable wire feed speed and minimizes splashing.

Overview

Advanced Inverter Welding Technology

The NBC-M Series Inverter CO2 Protective Welder is designed for versatile industrial applications, utilizing advanced inverter technology to deliver stable and precise welding performance. This unit is engineered for CO2 gas shielded welding, ensuring high weld quality with minimal spatter. Its compact, lightweight construction and adjustable parameters make it an ideal choice for both on-site operations and workshop environments.

Technical Specifications

Model Identifier	NBC-200M
Welding Process	CO2 Gas Shielded, Inverter

Key Features

Performance Highlights

200 A

Rated Capacity

Operational Benefits

- Lightweight design for portability
- Simple installation process
- Minimal splashing during operation
- Stable wire feed speed
- Adjustable voltage and current parameters
