

Iron Flat Washer

Iron flat washers are designed for distributing load and preventing loosening of fasteners. These washers are available in various sizes to accommodate different bolt and screw diameters.

Overview

High-Quality Iron Flat Washers

These iron flat washers are expertly designed to distribute load effectively and prevent the loosening of fasteners in critical assemblies. Engineered for durability and precision, they provide a smooth, reliable bearing surface suitable for heavy-duty use. They are an essential component for projects requiring secure connections in construction, machinery, and automotive applications.

Technical Details

Quality Features

Precise Dimensions • High Durability

Material	Iron
Primary Function	Load Distribution, Anti-Loosening, Bearing Surface

Applications

Common Applications

- Construction
- Machinery
- Automotive
