

Jaw Crusher for Stone and Rock

The Jaw Crusher is a stone and rock crushing machine. It is also used for crushing gravel and concrete.

Product Overview

Industrial Stone and Rock Crushing

The Jaw Crusher is a high-performance primary crushing machine designed specifically for processing various stones and rocks in industrial mining and construction applications. Engineered for durability and high output, it offers a reliable solution for heavy-duty material reduction. This unit is built to withstand rigorous operating conditions while maintaining efficient throughput for professional operations.

Operational Metrics

Operational Capacity

150 t/h

Hourly Throughput

200 mm

Max Feed Size

Technical Specifications

Material Composition	High Manganese Steel, Reinforced Cast Iron
Heavy Duty Certified	Yes
Drive System	Electric Motor with V-belt transmission

Usage Applications

Suitable Materials

- Basalt
- Granite
- Limestone
- Concrete Aggregate
