

Landfill Waste Compactor

This heavy-duty machine is designed for efficient waste management. It features specialized wheels with compaction teeth and a large blade for pushing and leveling waste.

Overview

Heavy-Duty Waste Management Solution

The XG6321F is a specialized landfill waste compactor engineered for high-density compaction and efficient site management. Built with a robust frame and powerful engine, it is designed to withstand the rigors of demanding landfill operations. Featuring specialized wheels with compaction teeth and a high-capacity blade, this machine ensures maximum waste density and precise leveling capabilities.

Technical Specifications

Model Number	XG6321F
Application	Landfill, Waste Management, Compaction

Key Features

Compaction Features

- Specialized wheels with compaction teeth
- High-density waste processing
- Large blade for pushing and leveling
- Robust frame construction

Operator Environment

Enhanced Visibility • Precision Control • Safety Focused
