

LCD Display Module

This LCD display module presents visual information clearly. It can be integrated into various electronic devices for displaying data and graphics.

Overview

High-Performance Actuation Solution

This electric over hydraulic actuator is a self-contained unit engineered for the remote actuation of hydraulic systems. By integrating an electric motor with a hydraulic pump and cylinder, it provides precise and powerful linear motion suitable for demanding industrial applications. The comprehensive design includes a reservoir, control valves, and all necessary plumbing, ensuring reliable performance in harsh environments.

Technical Specifications

Included Components

- Electric motor
- Hydraulic pump
- Hydraulic cylinder
- Reservoir
- Control valves
- Integrated plumbing

Actuation Type

Electric over Hydraulic

Applications

Ideal Applications

Steering Systems, Throttle Control, Valve Actuation, Remote Hydraulic Systems

Performance

Design Focus

Self-contained • Durable • Reliable • Precise Motion
