

Lead-Acid Batteries

These lead-acid batteries are designed for automotive and backup power applications. The batteries feature standard terminals and filler caps within a plastic casing.

Product Overview

Reliable DC Power Solutions

These lead-acid batteries are engineered to provide consistent and dependable DC power for a variety of demanding applications. Designed with durable, semi-translucent casings and secure terminal configurations, they are suitable for automotive use, backup power systems, and energy storage needs. Their robust construction ensures long-term reliability in environments requiring stable electrical output.

Technical Specifications

Design Features

- Blue top terminal housing
- Accessible filler caps
- Standardized terminal placement

Primary Applications	Automotive, Backup Power Systems, DC Power Storage
Casing Material	White/Translucent Plastic
