

LED Light Module for Emergency Lighting

This LED light module is designed for integration into emergency and security lighting systems. It features a robust polycarbonate construction and consumes 2W of power.

Overview

High-Efficiency Emergency Lighting Solution

This compact and efficient LED light module is specifically engineered for emergency and security lighting applications. Built with robust construction, it ensures reliable performance and longevity across a variety of environmental conditions. The module is designed for seamless integration into existing illumination systems, making it an ideal choice for professional lighting upgrades.

Technical Specifications

Primary Application	Emergency and Security Lighting
Key Features	Compact Design, High Efficiency, Robust Construction, Easy Integration
Integration Capability	Yes
