

Lighter Flint Spark Stones

Flint stones are designed for use in lighters to create sparks. When struck against a rough surface, these stones ignite flammable materials, providing a reliable ignition source.

Product Overview

Reliable Ignition Components

These lighter flint spark stones are engineered for consistent performance and reliable ignition. Designed to create sparks upon impact with a rough surface, they are essential components for lighters and various sparking devices. Available in multiple configurations including single stones, five-piece strips, and triangular shapes, these flints offer versatility for different lighter models and user requirements.

Technical Specifications

Available Shapes

- Single Stone
- 5-Piece Strip
- Triangle

Core Function

Ignition spark generation

Compatible Applications

Lighters, Sparking Devices, Ignition Systems
