

Liquid and Gas Meter

This meter is designed for measuring the flow of both liquids and gases. It provides accurate readings for industrial applications.

Overview

Industrial Metering Solution

This robust industrial device is engineered for precision measurement in liquid and gas applications. Designed for demanding environments, it features a heavy-duty construction that ensures reliability and durability under continuous operation. Its enclosed design and integrated cooling features make it a dependable component for critical industrial flow and metering systems.

Technical Specifications

Construction

Heavy-duty • Enclosed Design

Application

Liquid, Gas

Cooling Mechanism

Integrated ventilation grills

Connectivity

Electrical Connection

Side-mounted junction box
