

Locking Protractor 0-180 Degrees

This locking protractor is designed for precise angle measurements from 0 to 180 degrees. Its locking mechanism ensures the measured angle is securely held for accurate readings.

Product Overview

Precision Locking Protractor

This locking type protractor is a precision instrument engineered for accurately determining and transferring angles. Designed with a durable stainless steel construction, it features a reliable locking joint that secures the blade firmly at any desired angle. It is an essential tool for engineering, manufacturing, and woodworking applications requiring high-quality angle measurement and fabrication.

Technical Specifications

Measurement Range

180 degrees

Maximum Angle

Key Features

- Locking mechanism for secure angle retention
- Knurled locking nut for easy operation
- Suitable for bevel setting and angle transfer
- High-quality durable construction

Material

Stainless Steel

Applications

Primary Applications

Engineering, Manufacturing, Woodworking, Quality Control, Fabrication
