

Long Reach Excavator

This long reach excavator is a specialized piece of heavy machinery designed for excavation tasks requiring extended reach. It is suited for construction, dredging, and environmental remediation projects where standard excavators cannot access the work area.

Product Overview

Extended Reach Performance

The long reach excavator is an advanced machine engineered to handle excavation tasks in challenging environments where standard equipment falls short. Built with an extra-strong structure, it ensures reliable stability and high performance in tough working conditions. Its specialized design is ideal for complex construction, dredging, and environmental remediation projects, offering significant operational versatility.

Technical Specifications

Performance Highlights

18 m

Working Device Length

0.6 m³

Bucket Capacity

Key Machine Features

- Upgraded and rebuilt stable platform
- Reinforced boom and arm configuration
- Robust hydraulic system
- High stability undercarriage
- Ergonomic cabin design

Safety & Compliance

Engine Compliance

Emission Standards Compliant • Diesel Powered

Safety Equipment

Rollover Protection, Falling Object Protection, Emergency Shutdown System
