

Machinery Moving Kit with Hydraulic Toe Jack and Skates

This kit facilitates the relocation of heavy machinery. It includes a hydraulic toe jack for lifting and machinery skates and cargo trolleys for smooth movement.

Product Overview

Industrial Machinery Moving Solutions

This comprehensive machinery moving kit is designed for the safe and efficient relocation of heavy industrial equipment. The system integrates hydraulic toe jacks for precise lifting with durable machinery skates for smooth, controlled movement across various surfaces. Built for demanding environments, all steel components feature powder-coated or galvanized finishes to ensure superior corrosion resistance and long-term durability.

Technical Specifications

Design Features

- Low profile design for stability
- Corrosion-resistant finish
- Modular usage (multiple units can be combined)
- Hydraulic lifting mechanism

Construction Materials

All-Steel Components, Powder Coated, Galvanized

Applications

Suitable Applications

Large Project Logistics • Bridge Installation • Industrial Removal Works • Heavy Equipment Relocation

Operational Flexibility

Units can be used individually or combined in sets of two or more depending on load size and project requirements.
