

Main Isolating Switch

This main switch is designed to accept cable-in/cable-out connections and can be used as an isolating switch. The switch disconnects and is capable of switching both resistive and inductive loads.

Product Overview

Professional Main Isolating Switch

The R7 main switch is a versatile solution designed for reliable cable-in and cable-out connections. Engineered to function effectively as an isolating switch, it provides robust performance for both resistive and inductive load switching. This component ensures high operational standards by fully conforming to international IEC 60947-3 requirements.

Technical Specifications

Available Configurations

- 1P
- 2P
- 3P

Switching Capability

Resistive Loads • Inductive Loads

Standards

IEC 60947-3
