

Manual Grain Grinding Mill

This is a manually operated machine engineered for grinding grains and various materials. It features adjustable settings for achieving different fineness levels in the ground product.

Product Overview

Robust Manual Grinding Solution

The PMJ-5 is a durable, manually operated grinding mill engineered for consistent performance in environments where electricity is limited or traditional methods are preferred. Its sturdy metal construction and stable frame ensure reliability during heavy use, while the adjustable grinding mechanism allows operators to customize the fineness of the output. This versatile machine is an ideal choice for processing grains and various other materials with precision and ease.

Technical Specifications

Operation	Manual
Construction Material	Metal
Grinding Adjustment	Yes

Features

Key Features

- Durable metal construction
- Integrated hopper for material feeding
- Adjustable fineness settings
- Sturdy frame for operational stability
- No electricity required

Applications

Suitable For	Grain Grinding, Off-grid Processing, Traditional Milling, General Material Milling
