

Manual Pressure Test Pump

This hand test pump is a manually operated device designed for pressure testing various systems and components. It is suitable for testing pipelines, pressure vessels, and other hydraulic or pneumatic systems.

Product Overview

Professional Manual Pressure Test Pump

This manual pressure test pump is a robust, field-ready tool designed for precision pressure testing of pipelines, pressure vessels, and hydraulic systems. Featuring a durable copper pump body and outlet construction, it is engineered to withstand challenging job-site conditions. The device offers versatile operation with both 2-way automatic and manual locking mechanisms, ensuring reliable performance across a range of applications up to 50 bar.

Technical Specifications

Pressure Range

50 bar

Max Pressure

Operation Modes

- Manual
- Automatic

Key Materials

Copper Pump Body, Copper Outlet Parts

Locking System

2-way locking

Included Accessories

Package Contents

High-pressure hose • Connectors

Usage Environment

Job-Site Suitability

Yes
