

Manual Sheet Metal Hand Folder

Manually operated sheet metal folding machine designed for precise and efficient bending of metal sheets. It features adjustable clamping and bending mechanisms to accommodate various material thicknesses and desired bend angles.

Overview

Manual Sheet Metal Hand Folder

This manually operated sheet metal folding machine is engineered for precise and efficient bending of metal sheets. Featuring a robust construction, it ensures durability and stability during operation. Equipped with adjustable clamping and bending mechanisms, it accommodates various material thicknesses and desired bend angles, making it an ideal choice for small-scale production, prototyping, and custom metal fabrication projects.

Technical Capabilities

Operation Type

Manual

Key Features

- Robust construction for durability
- Adjustable clamping mechanism
- Adjustable bending mechanism
- Stable operation

Primary Function

Sheet metal folding and bending

Applications

Ideal For

Small-scale production, Prototyping, Custom metal fabrication
