

Marine Hose Valve with Chained Cap

This marine hose valve is designed for use in marine environments. It features a handwheel for operation and a chained cap to protect the hose connection.

Product Overview

Marine Hose Valve with Chained Cap

This marine hose valve is engineered for durable and reliable performance in demanding marine environments. Featuring a robust construction with a red-painted body and brass fittings, it offers excellent corrosion resistance and longevity. The unit is equipped with a manual handwheel for precise operation and includes a protective chained cap to secure the hose connection when not in use.

Design & Construction

Key Features

- Manual handwheel operation
- Chained protective cap
- Corrosion-resistant design
- Marine-grade durability

Materials

Cast Steel, Brass Fittings, Red-Painted Body

Application

Primary Applications

Marine Plumbing • Fire Suppression Systems

Compliance & Standards

Supported Standards

- JIS (Japanese Industrial Standards)
- DIN (German Institute for Standardization)
- ANSI (American National Standards Institute)
- BS (British Standards)
