

Material Hopper and Dryer System

This system features a material hopper with a pneumatic conveying system for efficient material transfer. A material dryer with fan-assisted ventilation ensures thorough drying.

System Overview

Integrated Material Processing

This industrial-grade system combines a material hopper with a high-efficiency dryer, designed to streamline material handling and preparation workflows. The unit features a mobile, wheeled base for enhanced site flexibility and integrates pneumatic conveying technology with advanced ventilation systems. It is an ideal solution for construction and manufacturing environments requiring consistent, moisture-controlled material output.

Mobility	Yes
Application Suitability	Construction, Material Handling, Industrial Drying, Pneumatic Conveying

Hopper Specifications

Key Components

- Material Hopper
- Pneumatic Conveying System
- Integrated Control Panel

Dryer Specifications

Key Components

- Cylindrical Drying Chamber
- Fan-Assisted Ventilation System
- Conical Discharge Chute
